

## Products for intensive care in hyperbaric chambers

The need for intensive care in the hyperbaric environment will likely grow in the future. GDA Sverige perform various integration projects for pressure chambers. We can supply products such as surveillance monitor, infusion pumps and ventilator with electricity and gas for use in up to maximum working chamber pressure.

## Installations in hyperbaric chambers

Gas supply is either from the existing supply, or from the new adapted installed gas supply. Electrical installation can advantageously be equipped with UPS power for uninterruptible power supply.

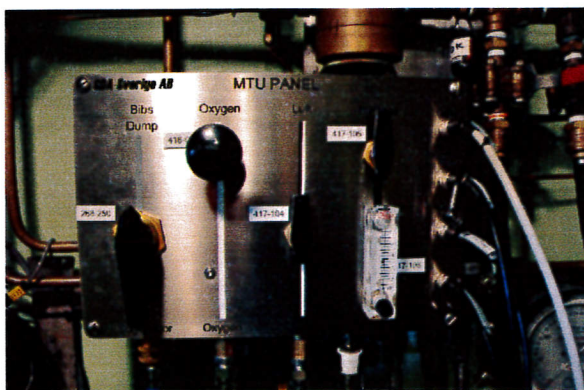

GDA Sverige can adjust medical equipment according to customer preference, based on the customer's existing hyperbaric-approved equipment. We can also integrate new systems within existing equipment. The location of the equipment inside the chamber is vital to adapt to customer needs and our experience enables virtually any position is possible. We have good references from completed installations including system safety and education in accordance with the standards and requirements of our

customers. The picture above is from an installation at the Swedish marine in Karlskrona.

## Distribution panel inside the chamber

We supply a stainless steel distribution panel with electricity and gas supply distributed to all the required equipment for quick start-up. We adapt our solutions to each customer's preference. We implement only environmental adapted valves, pipes and electrical items. New or modified chamber penetrators or penetrator for gas or electricity, we have good experience of manufacturing and certification in accordance with applicable regulatory requirements.

## Service and maintenance

GDA Sverige AB has an experienced service organization and in addition to installations we also perform service / troubleshooting and repair of existing gas supply and hyperbaric facilities. We are the largest service provider in the pressure chamber in the Swedish health care and the Defense Forces facilities.
